Foot baths made from larch or kambala wood

Fine wood surface planed and sanded, moulded joints glued water resistant, two hot dip galvanized steel hoops, approx. 16 litres water content, upper diameter 40 cm, height 20 cm, 2 longer staves (30 cm) as handles with grab-hole. Favourable packing units: 4-5 pieces per cardboard, approx. 14 pieces per standard sauna tub, approx. 48 pieces per pallet.

(*) Nature wood foot baths (art.no. 410/01 and 410/02) must be used with plastic insert art.no. "ES FW" to avoid leakage.

Big foot bath tubs (Ø 51 cm / Ø 63 cm)

made from larch or kambala wood

Same strong and solid construction as big sauna tubs (see page 6), cylindrical body, two hot dip galvanized retightenable steel hoops, clear coated all over, interior depth approx. 31 cm, outside height approx. 49 cm (sufficient clearance under bottom for siphon), other heights available on request. Including drain either with clicker valve or overflow pipe.

(*) Please add a „L“ for larch or a „K“ for kambala wood to the art.no. when ordering.

Shower buckets made from kambala wood

big 29-litres kambala bucket with 3 stainless steel hoops, approx. Ø 42 cm, 31 cm high, in 2 versions / surfaces:

- for indoor purposes: bucket clear coated all over (not uv resistant)
- for outdoors: bucket's inside with blue coating, bucket's outside with outdoor varnish

Features a very comfortable wide water downpour with easy to dispense water flow.

Heavy white rope, fastened to the bucket as a centred loop.

Water content can easily be adjusted at the filling valve between approx. 5 litres and 15 litres. Water supply to be connected to the filling valve on 3/8" or 1/2" male thread with a flexible hose (not included) either from left or right side.

Complete incl. stainless steel support for wall or ceiling installation, incl. pull rope and adjustable float valve.

For use in aggressive environment (salt, chlorine) we recommend the "SDV4A" version of the support.

All parts can be dismantled without tools.

522/03

Einzelteile / Lieferumfang 522/05
(separat parts 522/05)

Art.No.	Article / Model / Description
522/05	for indoor use, clear coated all over
522/03	for outdoor use (uv resistant): inside: blue coating, outside: weather protection oil
SDV4A	extra price for support made from high resistant stainless steel

Standard sauna tubs

Each single stave is moulded round according to the tub's oval shape and fine sanded after assembly, double-V joint glued water resistant, 3 hot dip galvanized retightenable steel hoops, drain with 1 1/4" male thread and stainless steel overflow pipe, incl. fixed inside step and hang-on ladder as outside step.

Standard height 100 cm, inside depth 82,5 cm.

Note: clear coating is not uv resistant. See page 8 - 9 for outdoor version with cover, optional drain and overflow, steps, seats, dimensions, panelling (wall junction) and stainless steel hoops.

Standard sauna tubs: optional surface / design

Sauna tub with plastic insert, perfect for public sauna

Stand-alone sauna tub from larch or kambala wood incl. blue plastic insert (sanitary PE). With moulded interior step and overflow channel (connected to the siphon under the drain). L x W x H = approx. 112 x 79 x 101 cm, 280 litres content. Wooden tub with 3 retightenable galvanized steel hoops, incl. hang-on ladder.

Note: clear coating is not uv resistant. See page 9 size "110x77" for outdoor version with cover.

We recommend for public sauna: refill package (see below) with block stair instead of hang-on ladder, with panelling to cover the refill technology, tub's outside with clear coating, outdoor varnish or wood wax finish.

Oval, 100 cm long, 72 cm wide. Content approx. 336 litres with 70 cm water level height:

Water refill set for sauna tubs with plastic insert

The water refill set "NF" includes: floating nozzle, solenoid valve, electronic refill control with adjustable closing time, water level sensor and ball valve outside of the tub (instead of plug).

The panelling for the technique is designed as a wall junction (means: the back is open).

Technical description: whenever a sauna guest has left the tub, an adjustable amount of fresh water will be automatically refilled (see brochure for detailed description).

Supplies: electronic control box at 230 V / 50 Hz via residual current operated device and circuit breaker / switch. Water supply via check valve (preventing flowing back) and shut-off valve to the solenoid valve. All supplies should be under the panelling.

Art.No.	Article / Model / Description	for Larch	Kambala
NF	Refill set, please order add.: panelling (cover for technique) and block stair		
NF Paket	Refill package "NF" incl. panelling (cover for technique) and block stair		

Big sauna tubs and bathtubs

Equipment as described for standard sauna tubs (hang-on ladder, inside step, overflow pipe), except: clear coated all over in general and more than 3 hoops as a standard. Note: clear coating is not uv resistant. See page 8 - 9 for outdoor version with cover, optional drain and overflow, steps / seat panels, dimensions, panelling (wall junction) and stainless steel hoops.

Examples for optional sizes: Ø133 cm, Ø96 cm, Ø82 cm, (75-) 100 x 64 cm, 146 x 79 cm, longer, wider ...

K556 „Block“

Cover Red Cedar / outdoor varnish

Cover thermo treated plywood / outdoor varnish

TB K 130x79 + cover plywood / outdoor varnish

Stainless steel hoops („INOX“) instead of hot dip galvanized hoops. See chart below, prices for complete set of hoops. **Outdoor varnish at tub's outside + cover made from Western Red Cedar clears or thermotreated plywood** for sheltering the tub's inside (see chart below. The extra price is compared to version "clear coated all around"). Always needed if tub should be used outdoors. If ordering only "outdoor varnish without cover" you must equip the tub with a cover afterwards by your own or you have to order the tub coated inside blue or black instead of clear.

Tub's size length x width	add stainless steel hoops	outdoor varnish without cover	outdoor varnish plus cover made from:	
			thermo treated plywood (dark)	red cedar clears, solid wood
100 cm x 72 cm				
110 cm x 77 cm				
122 cm x 72 cm				
130 cm x 79 cm				
161 cm x 79 cm				
149 cm x 90 cm				
168 cm x 106 cm				
Ø 112 cm				
Ø 153 cm	(**)	X		

(**) tub size Ø153 cm: "normal" stainless steel hoops are included in the standard price already. But for outdoor purposes or if a tub is planned to be filled for a longer period, we have to use "XXL stainless steel hoops" which are wider, thicker and stronger. Otherwise the hoops could burst.

Bath tubs

Standard equipment for all bath tubs:

Made from larch or kambala wood, clear coated with hygienic sealing all over, as an option also available with natural wax / oil.

With 3 – 4 retightenable hot dip galvanized hoops (depending on size), including drain with clicker valve “up&down” and siphon (ends with Ø50 mm pipe).

We recommend to order an overflow device whenever the bathroom has no floor drain.

Please check door sizes for transport.

We can manufacture **further sizes** as well, e.g. width of head end (73 cm) at both ends, intermediate lengths, wider, Ø132 cm, Ø96 cm, Ø82, 75 x 64 cm, 75 x 52 cm and “removable feet” to get a reduced height for transport.

Note: clear coating is not uv resistant. Refer to page 9 concerning cover and outdoor varnish.

Please choose the **outside height** between 60 cm and 70 cm (inside depth is always 17,5 cm less).

Shower tubs, bath tubs for children or pets with a maximum outside height of 40 cm: prices reduced by 10%.

Please indicate when ordering the following points:

hygienic sealing (standard) or wax / oil, outside height and a sketch with the following info: position of drain, overflow, hoop locks (only in area of head or foot end), backrests and position in room with sizes of panelling / wall junction (if applicable).

Wooden Shower Cabins

Luxury shower cabin designed to fit perfectly to the round shower glass doors „Heiler 550“ with CleanTec surface. Made from best Western Red Cedar wood, cabin's floor made from Kambala wood or Larch wood (because of its higher density). Clear coated with hygienic sealing all around, including drain and 3 retightenable hot dip galvanized hoops. The inside height is always 17,5 cm less than the outside height. We recommend to order the cabin including water supply unit „Viega Gemini“. So you can easily assemble an “on-wall” sprayer set 150 mm. Water supply should be made with flexible metal-woven hoses. As an option the cabin can be manufactured dividable into 2 pieces. Further accessories are: outside step, stainless steel hoops (INOX), and vertical panels (to cover the water supplies behind the cabin). The 180 cm high glass doors are frameless and the hinges are flat to the surface inside. So the doors are very easy to clean. The cabin's shape in the front corresponds to the round shape of the glass doors. As the cabin's front edge is on a bigger circle than the glass doors, the water is floating from the doors into the cabin. Sprayer set and mentioned accessories are not included in the standard equipment. If requested, we can assist you in checking, if the cabin must be dividable for the transport. All staircases and gates must be at least 100 cm wide. In most cases a door width of 75 – 80 cm is sufficient, if there is enough space beside the door to “twist and turn” the cabin through the door. When ordering, please let us know: position of drain and hoop locks together with a sketch of the place where the cabin will be placed (plus maybe a sketch of relevant transport spots as doors, staircases...). Together with a cabinet in the back (that covers the water supplies), this cabin can even be placed in the middle of the room. On request we can also offer the cabin with other sizes.

Whirlpools and whirl bath tubs

Standard equipment for all our whirlpools and whirl bath tubs:

Made from larch or kambala wood, clear coated all around with hygienic sealing. Clear coating is only for indoor purpose as it is not uv-resistant. For outdoors you need a cover and outdoor varnish (see accessories for sauna tubs). Additionally to the cover you have to order the air loop (next page) because we need a straight upper edge (no higher head end) for the cover.

We call it whirl bath tub if it is 70 cm high on the outside.

Our whirlpools are 100 cm high and come with a block stair.

The upper edge at the head end is 10 cm higher than the rest. As an alternative you can get the same height all around together with an air loop placed on top of the panelling (see next page).

Depending on tub's size including 3-5 hot dip galvanized steel hoops (with hoop locks to tighten the hoops), incl. standard drain: whirlpools with plug on chain, whirl bath tubs with clicker valve. Additional ball valve with handle on the panelling for emptying all pipes and hoses. Incl. outside overflow pipe made from pvc under the panelling, connected with the siphon under the drain.

All whirlpools and whirl bath tubs come with a panelling for corner position (horizontal and vertical panels to cover the technique and to fill the space between tub and room's wall). Optional positions: lengthwise the wall or with head end at the wall (same price) or niche position (extra price: see prices for bath tub panelling, difference between price for corner position and price for niche position).

Prices include seat panels or backrests at listed below. Additional seat elements can be ordered.

All whirlpools and whirl bath tubs are equipped with an air massage system (230 V / 50 Hz) that is installed ready to use: air blower with integrated air heater, electronic control box with touch pad on panelling for the following functions: on / off, plus / minus (smooth speed control) and variation mode (speed varies continuously between minimum and maximum). Automatic drying function as an option (we recommend manual drying). Amount of air nozzles (chrome plated brass) as listed below, 9 holes per nozzle. Venturi-jet massage system: see next page.

It is our policy to invest in the best quality of all technical components to prevent problems and claims.

Accessories / options for whirlpools and whirl bath tubs

Art.No.	Article / Model / Description
TB WP	Whirlpool dividable into 2 pieces (half of length) for critical transport situations
LB	Air loop, stainless steel. Placed on top of the panelling, instead of 10 cm higher head end. (= part of the pipe between blower and nozzles above maximum water level)
LD	Extra price for each additional air nozzle. Max. 12 air nozzles per standard blower.
LSys	Additional air massage system for more than 12 nozzles. With separate blower, control box, ball valve etc.
SKV	High performance side channel blower 230 Volt instead of standard blower. Perfect for long time use in public spas. Technique needs more space under the panelling. Without air heater, control box without speed control. Please add air heater to order. 400 Volt version: price + 15%
LH	Air heater with heat fuse and thermostat, 230 V, 400 W
Jet1	including: 2 venturi jets built in the tub's wall in back area (jet-direction can be adjusted), air control wheel on panelling, suction in tub's wall, pipe connection between pump and pool, whirlpool pump (230 V, 50 Hz, 0,55 kW – 1,4 kW) on wooden support, extension in electronic control box.
Jet2	same equipment as "Jet1", additional equipment: filter with 2 paper cartridges, electric heater (400 V, 6 kW or 9 kW) with thermostat. On request also available without filter or with different power of heater.
Jet2Eco	same equipment as "Jet2", but without filter and with less power of the heater: 230 V and 1,5 kW, 2 kW or 3 kW
UV	UV-Disinfection as an addition to Jet1, Jet2 or Jet2Eco
JD	2 additional venturi jets built in the tub's wall with separate air control wheel: Price does not include a larger panelling that might be necessary. For more than 5 venturi jets we need a second "Jet1".
UWS	Underwater spot light. Halogen / white, 12 V / 50 W. Incl. transformer and supplementing of electronic control and touch pad. Multi colour lights available on request.

For further accessories please refer to sauna tubs and bath tubs.

E.g.: stainless steel hoops, seat panels, backrests, tubs with reduced width, shaped cut at bottom edge, foot rest ...

Rainwater tubs

Made from larch or kambala wood, each single stave is moulded round according to the tub's shape, double-V joint glued water resistant, 3 - 4 hot dip galvanized retightenable steel hoops, incl. cover made from thermotreated plywood, drain in tub's floor connected with hosepipe. The clear hose is held by a hose clip at the tub's wall and performs the following tasks: taking out water, overflow device and water level indicator. Outside of tub and cover is varnished with uv-resistant stain, inside is coated with blue or black hygienic sealing. All tubs 100 cm high.

Available upon request: cut in the cover for the downpipe (let us know the Ø), tub without cover, without varnish, different sizes (see sauna tubs), heater / frost guardian, water collector (copper, stainless steel or galvanized) to be built in the downpipe incl. connection with tub.

inside and outside nature wood

outside nature wood, inside blue or black coating

outside varnished, inside blue or black hygienic coating

Tubs as garden ponds made from solid wood

Available in same sizes as bath tubs. Inside coated with black or blue hygienic sealing, outside varnished with uv-resistant stain, made from larch or kambala wood. Price for max. height 48 cm = 0,9 x price of bath tub same size.

Hot Tubs with wood heated stove placed beside the tub

All our tubs and bath tubs with outdoor equipment (cover and varnish) can also be combined with a wood heated stove, placed beside the tub. Including all connections to the tub.

stove, placed beside tub, connected to the tub (as additional equipment to tubs with cover and outdoor varnish)

BWK 161x79 + Chofu

Hot Tubs with underwater snorkel stove

Tubs are 100 cm high (inside depth 82,5 cm).

Our tubs are delivered ready to use! (no knock-down assembly kit).

Standard equipment includes: high quality tub (each single stave moulded round according to the tub's shape and fine sanded after assembly, double-V joint glued water resistant), retightenable stainless steel hoops, snorkel stove (marine aluminium) with stainless steel chimney, rain cap and ash scoop, hang-on ladder, drain, seat panels, safety fence and cover made from thermo treated plywood if indicated in chart below.

We use the original stove (be aware of the risk of cheap imitations!). Heating time approx. 2-3 hours.

Regulate the temperature by heating time and intensity or by adding cold water or closing the air intake.
